Use ChatGPT Voice:

1. Launch ChatGPT.

2. Access Settings: On the top-right corner, click on the three dots and navigate to 'Settings'. To use ChatGPT Voice features you need to enable them in Settings.

3. Activate Voice Conversations: In the 'Settings' menu, scroll down to 'New Features'. Ensure 'Voice Conversations' is toggled on.

4. With the setup complete, hit the headphone icon on the top-right. ChatGPT is now ready for voice language translation.

5. Instruct ChatGPT on your translation requirements. For example, if you want to translate English to Russian and vice versa, just let it know. Ask it to assume the role of an English/Russian translator and to translate everything you say in English to Russian and vice versa.
