You might try to prompt ChatGPT to do that in your instructions.

Let us know how successful it is!

My guess is the translation will be a little off, and I'm not sure how close the voice can be mimicked, if at all.

But you'll have fun trying to get it there!

I am both amazed at the LLM approach and disappointed by it. I am disappointed because the machine has no understanding of concepts, so it sometimes makes stupid mistakes. But I am amazed because even without understanding concepts, it does a pretty good job of appearing to do so. Of course, to do that requires an immense amount of data and processing power.

As I often say, LLMs are blind, deaf and dumb but they are very, very well read. That's no longer true because of multi-modal systems but the idea still applies. And it's even better because it's the analogy that makes it true, which is something the LLM cannot understand.

Still, we're getting there and that's really, really cool.
