Here's something different. A mid 70's electronica release by Isao Tomita of Japan using the moog synthesizer and mellotron. Interpreting Claude Debussy's 'tone painting'. Most notably Claire de lune. Having high sensitivity speakers really accentuates the symphonic effect. Always a nice change up to the usual fare.

I know. That looks like Spock on the cover, with his ears bobbed and a thin mustache.
It's actually a young Claude Debussy from a painting.
