Another in a continuing series with the two elder statesmen of what the world, needs now. Is PEACE and cooperation. That isn't the American philosophy. We want to stir the pot. We'll bargain with the devil as an asset like we've done in Syria recently. You name a hot spot in this world and we're there in some fashion instigating trouble.

These two vessels of wisdom know more about what our country does and has done than just about anyone. They know the historical precedence and the current foundations of our national and world economic and social status to lift the lid on what governments do and what implications they have. You can't find this analysis from the NY Times or any publication owned by our own oligarchic class that own the politicians. Democracy. Aristotle warned about it way back when.
