Even if they just provided recommended mounting location, that would be a help. Something like "designed for trunk mounting" or "best when mounted in door or kick panel where rear chamber space is small." That would give an indication of its basic tuning.

Might be best to do both - give T/S specs and suggested placement - because some people might not know how to interpret T/S specs but they would surely know if the speaker was made to go in a large trunk or a small kick panel.
