Subject: Interested in corner horn plans

Hello all- I'm building a new shop, which will have a finished workroom/office in it. Roughly 12x20, with maybe 9' ceiling. I expect to move around this room a bit, so am interested in having a large sweet spot. I am curious about using corner horns, but I'm not sure which size would work best in such a room. I am also curious about the design of the 8 pi, and if it could be used in the corner?

Could I get a look at the plans for the 7pi and the 8pi? Curious to see if I could build them.

Thanks!
