The eight Pi can be used in a corner. It's made to be able to work in a corner or along a wall, but it's best when used in a corner. It's a great speaker, but it is an entry-level model, whereas the six Pi and seven Pi are top-of-the-line. They aren't made to be placed anywhere but the corner, being more specialized and refined.

Please let me know which model sounds like it will work best for you and I'll send plans right away.
