Azuri wrote on Tue, 26 May 2020 21:10 Some people will tell you something is great, and it turns it's anything but. Those people are either hard of hearing or don't want to admit they made a bad buy.

It is also important that we come to a conclusion that at this stage, what is very okay for person A might not meet the expectations of person B. It even happens in sound production at studios. So, it is normal to see some recommend what worked for them, but at the end of the day, it might not be what you are looking for that can elevate the sound quality of your musical instruments when placed in a room.
