That is one fantastic setup you have there! Looks great!

I really don't see your crossover mistake. I can't see all the component connections, but it appears L1, C2 and C3 and the R1/R2 bank are all installed right. I see you've installed C1 instead of Rs, so that gives a little more sparkle up top. But nothing I can see would kill the tweeter. What was it?

That board is tough to populate for the seven Pi's. Stuff is everywhere.
