I've never left it. I wandered with digital. But vinyl has been the mainstay since that's all there was. The ritual aspect is quaint and I do my version of it. But my joy comes from having tailored as best I could my system to be able to play vinyl in a sense that gave me pleasure for having made it sound so good. Sure cd and streaming I guess, (I've never invested in it) is simpler and can sound fine too.

But I'm happy with what I got. Julia Lee & her Boyfriends absolutely require a turntable to listen to.
