Hi Wayne. Just would like to know (following a talk with another member of this forum in the middle of the year about small proximity monitors) if you have a monitor speaker (I know I could use all of them as a monitor). It would be great if you come out with a "Monitor Series" if you don't have one already. Or is it about that 3-way you had in the works? The french magazine SONOmag come out this month with a test for under €1.000 (amplif.) and they are going to test (they have it in the schedule) the ones over €1.000 next year. Monitor Pi Regards

Thanks Wayne, ...I take some (my) time to appreciate real jewels. Best Regards and also Happy New Year Ps: in the process it also serves as an inspiration (...of something I will get in the future! ...just kidding, who knows?) I am more involved in the process and beauty of it than anything else. And this is like Ikea's brings homes.
