For those that have built the Pi 2 Towers, can you relate what sort of f3 bass I can expect in a moderate sized room?ThanksMark

Haven't built them, but the depending on room placement, (and I've heard a few them several times) there between 40 to 47Hz on moderately size rooms that I've heard. There pretty damn good for a 2-way, and the price vs. perfomence is kinda hard to touch.HTHBill W.

They'll reach 35Hz f3 outdoors, lower indoors with room gain.

Wow, that's lower than I thought they would.

that the Alpha 10 can be tuned to reach 35Hz. The size and shape of the tower box isn't standard

extension at the expense of having a taller box.The Alpha 10 is a bit unusual, in that it works pretty well in a bookshelf speaker, a larger subwoofer sized box or a midhorn. That's three fairly different applications, each of which the Alpha 10 works pretty well in.
