
Subject: Two Pi Towers with H290/PSD2002 - do-able?

Due to size constraints and my desire to use the PSD2002, is it possible to build a Studio Two Tower (with the Alpha 10") and to use the PSD2002/H290 in place of the Vifa DX25. If so what changes would be necessary to the X/O?Alternatively, would the Thermonice Three be better and have more bass? I could possibly just about go to this size if I had to!Do either of these require a sub woofer? Apparently the Two Tower does not, but what about the Thermonic Three? The Theatre Four are just not possible and I know that these would be the ideal solution!The amplifier to drive these will be a 300B S.E.T.Many thanks and any comments would be valued.Derek

Ok Wayne, I appreciate that what I am seeking is in fact the Eight Pi, but looking at the size of the cabinet, it looks to be - large - to say the least, 10cu.ft, whereas the Tower Two is half that. So this is what I am wondering is if I can use the cabinet of the Two Tower with the PSD2002 horn, rather than build the Eight (which I am sure is a better solution), since 5cu ft is the absolute max volume I can do in the intended room.That said, I would still like to get the plans for the eight!... just in case... !!!!Thanks again for you advise and help in this,Derek

The midhorn takes up some space, but the rear chamber is only 5ft3. It looks like a mini-VOTT, but it isn't nearly as large.

Subject: Tell me your E-Mail address, I'll send you the plans
