Wayne.. Do you remember the name or web site/plans for the corner horn build in late 60's. I built from Mechanics illustrated plans. Sure was a copy of something Klipsch did. It was front firing like yours but sides were tapered into long slot facing corner. Around 48" tall if I remembered. Would love to build another set with your drivers and horns. Was the very first speaker I ever built. Damn hard project with a cheap radial arm saw in a utility room not over 6' x 6'.Zene

Maybe you're talking about the Speakerlab Khorn clone?

Wayne ... Here is crude pic looking down from top, speaker on front face and a 1" wide slot in back faces corner. Zene
Corner horn

That looks most like an old Tannoy GRF cornerhorn. You might also look at the Jensen Imperial and JBL Hartsfield cornerhorns.
