Hi, Can anyone direct me to a good set of Studio Two construction photos? Searching the archive brings up a few links but they're mostly dead. Trying to figure out if I can build these or if I have to hire someone. Thanks in advance, Peter

The following pix are for a very similar 2 way design: Sure you can. Just a box with a couple of holes. :-)

Don't know how that double post happened. Just wanted to add a few things: Screws or nails are a viable alternative to clamps, plywood is less messy and lighter than MDF, White or yellow carpenter's glue is best, and not to obsess over methods and materials; some Pi is better than no Pi!

Building 2-way narrative

Thanks for your help, Bill. I deleted that accidental second post.
