Wayne, What is included in the 10" wood midrange kit. How much is the horn flat pack + 10" eminence driver. Actually what I want is the cost of a kit with the 10" horn midbass, high frequency compression tweeter, plus crossover for this setup. I want to integrate this with the Lascala bass horn.ThanksRobert

The midhorn flatpack kit includes the four flare sides and the throat plate plus Miller dowels for

easy assembly. You don't need clamps with this setup because the Miller dowels hold everything in place. Cost depends on the wood chosen. A kit like you're talking about would be about \$350-400, depending on the wood you pick.
