Wayne, the wife has been cool with the ever growing collection of Pi speakers around the house but the tower 2's really are a little large for rear surrounds so I've been thinking... If I built a cabinet 36" tall with the same volume as the smaller pi 2 and used a psd 2002 tweeter to match the theater 4's we might both be happy. What would I need to do to the crossover to change tweeters? Would the box tuning need to be changed since the speakers will be right up against the rear wall? BTW, I did get a little crown amp and it really woke up the theater 4's. The fan is noisy, but I don't even notice it after I put the amp in my entertainment center. I'm saving up for some JBL's now.

that design. If it is still too large, you could do something like you're talking about with a crossover

works perfectly for surrounds.
