Subject: Where are enclosure plans?

Was looking at the kits. Thought the two tower might be a nice project for living room speakers. I would assume the kits come with all parts needed except enclosure? Are there plans for enclosures written anywhere?Is the two tower base reflex or acoustic suspension? If BR, do you need to by a port tube separately or is it included in kit or not needed?

bass-reflex or horn, or a combination of the two.If a ducted vent is used, then port material is

rectangular port made from wood.Kits include the speaker drivers, the connector panel, hook up

compression tweeter and crossover network, kits also include the crossover, tweeter compensation cable assembly, Zobel woofer damper, and all cable assemblies are completed and ready to install. Every kit containing a compression driver also includes the horn flare and the bolts to mount the driver to the horn.
