I would also like to add that I have visited many many sites but this is by far my favorite. Wayne cannot have much time for anything else. The forum has been very helpful in my deciding what to build. In the end I will have pi7's. One question I have not found the answer to. Why LITERS? I buy milk by the liter. I build boxes by cu. ft. or it should be cu. cm. ???

Thanks, David, kind words indeed. I had a physics instructor that gave a test one time with an odd twist - he wanted all velocities to be given in furlongs per fortnight.

Hi David, I don't know which one(s) you use. I find this one (on-line calculator) very helpful. I think we will need both for at least one or two generations...

Conversion Calculator

If it doesn't work do this: Go to this

site: <http://www.kbapps.com/audio/speakerdesign/calculators/Default.htm> and press "Conversion Calculators" on the left menu.

"Conversion Calculators"

Here's another good one:
Common unit conversion program
