Wayne or others, Is it possible to substitute the old .63 mH coil from the old Theatewr 4 xover for the specified .5mH coil in the new xover? If so, what sonic effect of the difference would you expect? (PSD 2002 and Eminence Delta 15) Thanks! Garland

I'd probably try it just to see how it sounded. I'm not sure how much shift you'll see; My guess is it might make a slight dip in the crossover region, maybe a shift in the angle of the null angles.
