Hi All, I was just turned on to Pi Speakers and think that the midhorn flat Pack Kit is just what I need. However, I can't seem to find any data on size, spl, or freq response on the site. Can anyone help me? Cheers.

Hi Wayne, this looks like the perfect fit for my system. What type of horn is this? I ask because I have EV 8hd horns now that cover from 800 to 3600hz. I want to go with your horn from 200 to 2000hz. With the EV horn, it sound Honky and cuppy. Cheers.

It's a conical horn. I've used a lot of conicals over the years and I like them for low coloration and uniform directivity.

Thanks Wayne, that is the type horn I've been looking for. I have Jensen Imperial cabinets with

EV Sp-15 woofs that can go way beyond 300hz, and Heil AMT tweeters that can't cross any lower than 2.5khz. I am thinking that your midhorn would fit nicely into those two. Do they make the Delta 10 in a 16ohm version? I will run them with a 300B tube amp. Cheers.
