Hi, how important is the horn itself on the sound? Is the quality of a horn loaded speaker mainly determined by the compression driver, or is the horn itself equally important. Can a good horn make the speaker sound smoother and warmer etc? Or does it only change imaging effect? And how does the different horn material (e.g. wood/plastic/metal) affect the sound? Thanks.

It does both of those. Just as you would expect, but the shape of the horn influences the sound and soundstage much more than the material itself.

The horn shape determines everything. The compression driver has its part in the equation too, but the horn is really the dominant factor, setting pretty much everything about the character of the sound, from response shape and quality to coverage angle and uniformity of directivity.

Wayne, If you were to talk about horns in general terms, what are the range of characteristics that drive the variations of the available horns on the market? If there was one ideal horn for every application, seems like most horns would look very much the same. But there is a pretty wide variety of flare shapes available. I can understand the various sizes for different low freq cut-off. Thx, Chris

Hi Wayne, In that case, is there any benefit of using wooden horn besides good look? Or we can make a horn just as good with plastic? Thanks.

This post from the archives talks about various horn shapes and what they have to offer: Characteristics of various horn flares

Well, like all things, quality is not always measured with a ruler, stopwatch or, in this case, acoustic measurement system. The best Rolls will never win any race, but it is a genuinely fine machine. That said, there is a difference in how different materials ring. The bell modes of a given horn made from different materials will be different. A metal horn might ring sharply, whereas a plastic horn of the same shape will not. A wood horn will probably be even more well damped. It all depends on the material, its hardness and internal stresses, damping, bracing, etc.
