Hi, is there any argument for a use of the 2pi system as a in-wall speaker? I am thinking of a multimedia panel with a flatscreen tv and speakers left and right. Thanks Frank

I think this will work out very nicely, especially used for home theater in the way you propose. You could also do this for surrounds and possibly for subs. However, I suggest that you do a test run first, making sure the room layout works for you and the acoustics are right.
