Wayne,I happened across

these:<http://www.erseaudio.com/Products/SPXProSpeakerCabinets> and wondered if they could work as Pi 4 cabinets. I'm not sure what your current volume is, and it looks like the built-in flare is narrow compared to yours, so maybe the crossover might be a touch higher. The price seems fair if they could give a good result. take care, Skip

I'm not sure that horn will sound real good. I have never liked those kinds of horns with the Mantaray-style features.
