Hey Wayne,Couple of questions regarding the 2pi's - Are the drivers used still the Alpha 10A and Vifa DX25? If so, how is the rated system sensitivity (95db) higher than the tweeter's rated sensitivity? Along those same lines, is there any BSC built into the crossover? And most importantly, how can this kit possibly be so cheap? The (retail) price of those drivers is damn near the kit price... does it come with crossover components? Can you share what order and frequency, or is that proprietary? Thanks, and sorry for the third degree! Kevin

Kits come with the drivers, the crossover and amplifier connector panel, all wired up and ready to go. You just supply the box. Sensitivity is rated at 95dB/W/M, but the tweeter is slightly lower than the midwoofer output. Response looks like this:
