Subject: 2 Pi amp - Kramer 903?

Would an amplifier that produces 2 x 10 watts RMS into 4 ohms be suitable for a pair of 2 Pi (not the tower) in a 10' x 12' bedroom? I found this alternative to a DIY gainclone or T-amp with all the features I would want for around $150. Does anybody have any thoughts or experience with this amp? Thanks
Kramer 903 Personal Amp

sensitive speakers with a benign impedance curve. Makes them an easy load to drive.
