What is the best way or the Pi-align crossover for a LaScala ? Maybe you have a schematic that you believe works best ? Thanks and God Bless!!!

Sorry, I don't do anything with Klipsch speakers. They're cool and all, but my stuff is different enough that you can't really cross-pollinate without serious modifications. If the Klipsch midhorn could be used an octave or two lower, if the tweeter horn were CD, and if the acoustic geometrical relationships were the same between them then you could use the same crossover I use in the

one with the other.
