What's the weather like where you're at? In Tulsa, we've had an unseasonably cool few days and yesterday we set a record. The high was in the low seventies and the low is in the fifties. We normally have over 100 degree days for three months in the summers. Makes you think...

We're in the thick of what I call the 90-90's: temps and humidity, that is. It's just naturally N'Awlins this summer, dahlin'.

Read the book entitled "Chaos" by James Glick
(http://www.amazon.com/exec/obidos/ASIN/0140092501/qid=1095522144/sr=ka-1/ref=pd_ka_1/102-4588005-3358518) In the beginning he explains weather changes in terms of very subtle global influences in a non-linear dynamic system. Goes on further and kind of gets boring, but the first few chapters are well worth reading.....Colin

Seems like I may have heard Art Bell interview him at one time or another. I've always been fascinated with this kind of thing. Have you ever seen computer simulations using fractals and chaos theory? It is an interesting science, and it even almost resembles art. That's sort of like Escher to me.

I loved Art Bell when he still did "Coast to Coast." I used to listen to him when CtC still streamed broadcast a day late - ah, those were the good ol' days at work. This is where I first learned about supposed chemtrails. Funny thing though, today was the first day since I moved to Cincinnati that I have not seen any - even my 2 year old son noticed how clear the sky was....Colin

I've enjoyed Coast to Coast for the last ten years or so. Most of the time I had to pick it up from a radio station several hundred miles away, most often WOAI 1200 in San Antonio. But for the last year it has been broadcast from a local station, KFAQ 1170 in Tulsa. Both are 50,000 watters so they boom out a signal for a long way. I've always liked Art Bell and was sad when he stopped doing the nightly show. But George Noory seems like a real nice guy too. I still enjoy the show very much. And did you know that Art is back to doing the show on weekend? Click on the radio - He's on the air right now.
