Hi allPerhaps yould like to see some pictures, of my local area of New Zealand.Over the past year ive taken about 1200 images with my basic digital camera.I plan on adding some more pictures soon,to end up with about two to three times the current amount.Unfortunately having some problems with MSWORD making html pages in an uneconomical way - the only real thumbnails page is the mt cargill one + no FTP on free geocities, i keep the FTP for forum picture usages on my real site,which can only contain 5mb ! vs 15mb of free geocities that takes ages to upload-which sometimes times out due to 56k modem haha.Now ive got to fix my meta tags,so that anyone actually looking for the pics can find them!Regards!Mike.e
My pictures!

not my dog,it just followed me for awhile,eventually the owner came past,he said she catches goats ,but it seemed friendly enough Ive been looking up the 1:50,000 map,to see mountains which are closer to 600m high,1800ft which id like to go to over the summer.Those mountains are more serious,I couldnt go alone-have to find some one who wants to go.Cheers!

That sounds really cool, Mike. Sometimes it's nice to get outdoors and just go.Back to indoor activities, I have a couple of LAB12's here that are under the knife. Actually, the only thing we've modified is the vent screen. We've removed them and are testing. Monte is testing airflow

through the vent at various frequencies and excursions. I'm testing leakage through the gap; Actually, I'm testing the change of resonant frequency in various conditions: Free air, vent open, vent plugged, closed box and closed box vented to free air. Tamas is testing heat buildup and we may do that too, just to compare notes.I thought you might find that interesting.
