Great, good, excellent, cool are just a few words to discribe this movie. Its about gentic cloning for the ultra rich. A mega company has grown with the defense department to grow exact human clones for replacment parts(i.e. liver lungs etc.). It poses a moral conundrum. If we grow clones and we cant keep them from consciousness because the organs fail without it are they not human?? Plus the mega hottie ,my favorite star at the moment, Scarlett Johansson. It got great action scenes, excellent lines. Defiently one the best flicks I've seen in a moment...

I liked The Island too. Reminded me of Logan's Run.

I wanna see The Island - I've seen Logans Run. I like Scarlett Johannson, and Jenny Agutter, too
Man, there's WAY to many movies I don't get around to see
