PC Pro has a very good article concerning the actual application of DRM technology. I found it to be very interesting. I don't know how true this is but they seem to think it is common practice; "Apply a fingernail sized peice of opaque tape to the outer rim of the disc and the CD reader then treats the CD as an ordinary single-session music CD."

Ah-hah, so an edge reflection is sensed to determine the type of CD, yes? I'll have to read-up on this. Thanks for the tip.

My pleasure; hope it helps. Also; we can break-out that old green felt tip marker from a few years ago.
