the world would either come to an end, or be vastly improved, depending on your POV. From a few of them: threatened to drive one of our sponsors out of business gave vendor enough grief to make that vendor redirect energy to him than the tasks at hand serving the audiophile community***this was one of my favs, but I'm sure that what ever 'grief' I dispensed was required at the time. As far as 'serving the audiophile community' goes, as a memeber of that community, I don't remember being served at all, let alone poorly. Either way, I am going to continue with building myself better audio. Anybody who wants to come along is quite welcome. cheers, Douglas

You are a spy....ROFLMAO....such a bad bad boy. You should be whipped with secret recipe trade marked magnet wire....blindfolded of course so you won't try to reverse engineer it and copy it:) Riddle me this, why are we so concerned with grid choke/center tapped choke inductance and what happens when a signal drives the grid positive but yet IT coupling is advised for these same tubes that need a low value grid leak resistor....and they sometimes are operated in clas A2. Russ

[View Forum Message](#) <> [Reply to Message](#)

Hey-Hey!!!, The grid choke is cap coupled. If there's DC out, there has to be DC in. The IT can take DC in, albiet at a different load line slope. The cap interferes with this, no? cheers, Douglas

I don't know Douglas; I think you are being too hard on yourself here. I mean you seem always to be helpfull and curiously seeking the better way and better sound. Sounds fair to me. I have not seen any evidence you are profiting from others and you sure helped me build one damn fine pre-amp asking nothing in return. Thats what I like; it's not what you say, it's what you do. And It's

hard for me to understand how a hunk of iron wrapped in wire and insulation merriits any protection anyway. Yeah; maybe the first guy who thought of building one should reap some reward, but after that; it belongs to the world.

Hi MB: you wrote: ::::... understand how a hunk of iron wrapped in wire and insulation merriits any protection anyway. Yeah; maybe the first guy who thought of building one should reap some reward, but after that; it belongs to the world. :::: would the same logic apply to all speaker designs, amplifier designs, digital designs, etc? So... anyone should be able to come on an ART forum and offer clones (explicit copies) of say Norman Tracy's digital designs? Or offer hotrod copies of say a Wavelength Audio Brick? And use these guys names and reputations to sell their fakes? Do you think the forums should be opened up to explicit copies of PI speaker designs? And allow the cloner to use the PI namesake and goodwill to "market" their clones? would love to see someone take the BOSE or MONSTER CABLE challenge...msl

The whole goodwill legal doctrine exists as a name recognition benefit. If someone changes a wire from one side of the input jack to another then claims copyright thats unproductive. I must take a stand here and say this; if the design existed previously in 80% of it's incarnation then it does not violate any responsible definition of reasonable behaviour. That makes me a bad guy I know but it's time people began concentrating on creating instead of hoarding. All amplifier designs that borrow from the past and just re-organise existing technology are free and open to use by all. Will that prevent people from designing because it will not be a lockin for their bottom-line? Naah; never has before. In fact; before the deluge of protectionist legal restrictions extended to any tiny re-design effort there was more creativity in the design arena. Thats the side I am sorry to say that seems correct to me.

Subject: this assumes a critical thing...

[View Forum Message](#) <> [Reply to Message](#)

An idea, or process, or _____ must have some basis to acquire protection. This protection will also be carefully spelled out as to its extent. And this protection has time limits. There are lots of neat ideas which were not given protection. For example, the snowmobile track drive system. Too many people were playing with it. Parallel discoveries would have been made and some inventor in Colorado could arrive at the same sol'n as a sled man in New Mexico. As suggested by some poster below, change one resistor, and I can call it mine...or something like that. Or another neat attempt at humor, grabbing the Guinevere schematic for his own profit. Let me suggest a few improvements...they've already been discussed on GB. That pre would make some nice competition for the established budget kit sellers I would hope. When the best Physicists were gathered together in 'the institute for advanced study' or similar, no more discoveries were made. The difference? too much free time? too old? you'll love this....no students! take away interaction and spread of knowlege, and advancement ceases. So spread it around as widely and thoroughly as is possible. Play with it, modify it, take it apart and put it back together. Teach somebody else to do the same and the Art will advance. I would rather see Audio advance in such a fashion, rather than in a Middle Ages Church setting where the Priesthood is in control over a large fraction of the available information, which is hoarded as a mizer his coins. No joy there, that's for sure. cheers, Douglas

Douglas; you saved me a whole half-hour of posting with that one. Quick reaction; the best music

was written when there were few protections available; should we sacrifice quality so some fraction of performers can own the musical landscape; and the majority of the arguments revolving around this issue here have been specious at best and disengenous at worst.If the purpose and intent of copy protectionism legislation was to wall off vast tracts of progress it would not exist and the inability to enforce most of this issue as defined in court leads me to believe there isn't much merriitt in the arguments as presented.

And It's hard for me to understand how a hunk of iron wrapped in wire and insulation merriits any protection anyway. Yeah; maybe the first guy who thought of building one should reap some reward, but after that; it belongs to the world.Fine.But answer me this. Why should Douglas make any reference whatsoever to Peerless with regard to the transformer he's having made by Heyboer? In terms of its function as a transformer, all the amplifier gives a rat's sphincter about is its electrical characteristics. It doesn't matter one bit what name happens to be printed on it.So why then does the name Peerless have to be mentioned at all except for the purpose of exploiting someone else's good name and reputation?se

Subject: Re: Now you/we/whomever can add one more thing to the list

Posted by [Manualblock](#) on Thu, 05 Jan 2006 20:21:44 GMT

[View Forum Message](#) <> [Reply to Message](#)

Well; Douglas is making so many changes so quickly to his circuits that calling the transformer by name eliminates the possibility of mis-communicating the specs for that circuit. Instead of having to post the same specs over and again it is easier to give it a name. It's like if you were DIY'ing a Chevy 350 for the track you wouldn't go around quoting the bore and stroke sizes every time you wanted to address the engine or change parts somewhere in the drivetrain. I would imagine the parts guys would get pissed after a while. So you ask for a Chevy 350 crank or whatever.

[View Forum Message](#) <> [Reply to Message](#)

so... why not call it a Heyboer HTS-745* or E-Linear XY-ZS? Calling your new corner horn contraption a "klipshhorn" is not likely to fly too well with the Klipsch people. And I would bet a copycat product explicitly trading on their namesake and goodwill would be but a short lived venture.

Subject: parsing of language....

Posted by [MQracing](#) on Thu, 05 Jan 2006 20:50:27 GMT

[View Forum Message](#) <> [Reply to Message](#)

you mention the "language" or communication needs of racers...actually it's sparsed down quite a bit more than you suggest...I want a crower. 3.75" with 2.1" mains,5140 nitrided, 43lbs and knifed.that's all ya need to say to a really good parts man and he won't confuse your request with a ford or a mercedes crankshaft.but if he a really good parts man... he will need to know your bobweight and rod length and whether the rotating assembly is externally or internally balanced.so... simply telling the parts man it's for a chevy 350 isn't actually good enough anyway. And you need to tell him if it is a new style seal (one piece) or an old sytle seal (two piece).msl

[View Forum Message](#) <> [Reply to Message](#)

Shit, these days they all ask what make and model first. Try and ask for a part by its specs and they all seem to get a glazed look on their faces. Machine shops are naturally pretty technical but parts houses aren't. That has nothing to do with what you guys are talking about, but me and my hotrod car buddies always talk about how things have changed at places like Napa and AutoZone.

Subject: Re: and if you want to use genuine Honda rods....

Posted by [MQracing](#) on Thu, 05 Jan 2006 21:20:00 GMT

napa and autozoneyear, model, make, number of cylinders.... and the guy looks it up on a computer.mine was for the knowledgeable racing community... here a good parts house or engine builder will be quite fluent when you say you want that crower with the 1.85" journals and he will know your lookin' to use a honda rod.for your mom and pop car... at Manny, Moe, and Jack's (PEPBOYS) just have the vehicle ID card with ya... cause the guy behind the counter was working at Burger King last week.msl

I've been following this argument, off and on, for months. I agree with a post Doug made further down; this whole argument is personal. It think its quite apparent, that while Doug's e-linear design started life as Mike's Peerless S-265, the product delivered, HTS-7952-2, is quite different. I think most of us understand that Doug started with your design because it got him the closest to where he needed to go. But we also understand that the tranny Heyboer delivered is no more a Peerless design, than the ST-70 clones that Uncle Ned offers are a Dyna design. Are they close? Yes they are. Are the Heyboer's superior to, or inferior to the Peerless units? I guess that would depend on circuit, use, loyalties, and a million of subjective factors that make us choose one product over another. I guess my question in all this is; are you upset because some one, any one, reengineered one of your products, or are you upset because it was Doug who did this? You both have a lot to offer those of us who are much less experienced. That you guys disagree on just about every thing is evident. But the opposing veiws can be very instructive to many of us. I doubt Doug is ever going to be a threat to your bottom line, Mike. While he may do things that you find difficult to swallow, he's not in competition with you. His redesigns of other peoples products are for his own use. So.... can't we bury the hatchet, in neutral ground, and move on? Joe
