No jobs and no wages but inflationary pressure on the economy? No chance it might have something to do with the money supply basically becoming worthless? Something about the fed printing deficit money to finance bogus oil acquisitions from Iraq using massively expensive military manuevers fully funded by the American * Middle-Class* taxpayer? To support the military contractors and oil companies whose home states are Texas and Florida. And billions in phony money to finance phanthom homeland security by paying huge sums to fly-by-night corporations? OOOh; anyone ever read about 1926? Or Argentina and 2000% inflation; shoebox full of cash to buy a loaf of bread? And they almost got ahold of our Social Security for a minute there. These are the real Pirates Of The Carribean. RNC; Rigged National Con.
