Can the 2-pi tower be used for the 3-Pi 12 inch woofer and horn ?

What would be the spacing ? THanks

I've never put that woofer in a cabinet like that. I suppose it would work, probably with some port retuning. I'd keep the woofer to tweeter distance relationship the same.

i built a 3pi in a little taller enclosure than the plans spec'd.

i'm happy with the sound...still haven't unhooked them to stain and finish...

i haven't heard the regular 3pi so i can't comment on sound differences.

also my enclosures are still only 34" tall. i think the 2pi tower is much taller than that right?

I believe the 2-pi towers are 46 inches tall x 16 inches wide x 13 inches deep.
