Been looking over the PE catalog a lot lately, keep it right next to the Charmin

There's a new Vifa tweeter supposed to be 96dB for 12 bucks http://www.parts-express.com/pe/showdetl.cfm?Partnumber=264-1028 Maybe that's an upgrade or alternative to the current Vifa in the 2Pi?

Then I've been thinking about the B&C 18,

http://www.parts-express.com/pe/showdetl.cfm?Partnumber=294-676 or 15

http://www.parts-express.com/pe/showdetl.cfm?Partnumber=294-670 with the 8" I already have http://www.parts-express.com/pe/showdetl.cfm?Partnumber=294-652 and then the good ole DE-250 or maybe this new 1.4" they've got.

I make a motion that Wayne get busy right away on testing B&C 18s and 15s as substitution for the JBLs. And while yer at it, Wayne, maybe a B&C 10 or 12 could replace the Alpha in a killer 2Pi? They have Fs @ 50Hz also.

I checked out some of the B&C woofers, and there are a couple that would work as drop-in

don't consider them an upgrade for the JBL 22xx series parts, or even a lateral move. I think the midrange sounds clearer from the JBL's. That's why I decided not to go further with the B&C woofers. But if you find some at a real good price, they might be worth looking at as an option to the Eminence Omega series parts. They're in about the same price range.

While we are on the subject of woofer upgrades to Pi speaker designs.

I was wondering if there are any current production driver upgrades to the Eminence Alpha 10" in the Seven Pi midhorn, that would be a good mate to the JBL 2226H mid-bass driver?

I see where you mention the JBL 2012H as being an upgrade path. But, since JBL discontinued this 10", they are hard to come by, and expensive when found.

I was wondering if the Eminence Deltalite 2510 would be a good inexpensive alternative? :

http://www.eminence.com/pdf/deltaliteII2510.pdf

But, they are no where the quality of driver as the JBL 2012H with aluminum and copper ring over pole peice.

Possibly one of the Eighteen sound 10" drivers would work?

http://www.eighteensound.com/index.aspx?mainMenu=view\_product&pid=290

Or:

http://www.eighteensound.com/index.aspx?mainMenu=view\_product&pid=274

Maybe one of these Eighteen sound drivers would have the efficiency to keep up with something as crazy as a pair of JBL 2226J per bass cabinet in the Seven Pi speaker?

drawn to it more than the 2012. The midhorn with the Delta 10 has a very warm, creamy sound that I just plain like. I know, that's terribly unscientific, but for whatever reason, I like the sound of the Delta 10 in the midhorn.

10 allows rear loading for the bass. But I prefer the Delta 10 when used as a dedicated midrange.

Normally, I much prefer the JBL drivers for midbass and midrange. As direct radiators, the 2012 and 2123 definitely sound better to me than the Delta 10. But I think the horn loading reduces excursion enough to equal the distortion reduction gained by the shorting ring. Sure, that means the combination of a shorting ring and horn loading would reduce it even further, but I think I prefer the Delta 10 anyway. It sounds very nice in the midhorn.

I see says the blind man, the Delta 10, not Alpha, my mistake.

Well, that is a whole other ball game when it comes to higher efficiency needed to mate two 2226J per channel.

I have enjoyed the midrange quality in the Seven Pi design every time I have listened over the years.

Good enough!

**Thanks**

Thanks Jim for the heads up.	The verdict is still	out regarding	where I will	go with this.	Actually,
the verdict has been a long tir	ne coming.				

Please send me a PM?

I'll contact my friend first - to see if he does want to sell them, and what his price would be.

Jim
