Looking for a chip amp for the kids' room. Lots of them out there but cannot find one with dual input. Don't need a lot of watts - just easy to use. Any suggestions?

Not exactly what you've asked for - as these are single channel amps - but I've always liked the LM1875 and LM3875 chip amps. They're very easy to use and they sound good. Just run two.

LM4780 is a dual chip amp, consisting of two LM3386 dice in the one package.

Oh, yes, good catch. Here's the datasheet:
LM4780
