I am blown away by the specs of these amps. Has anyone personal experience with how these amps sound?for example the 9505 specs out with a slew rate of 150v/us and damping factors of 1000 up to 1khz(oops just realized the damping factor not qualified by at what impedance).

Anyways how about that slew rate?I'm thinking of picking up a slew(3 or 4) of P7000 models for my Home Theatre and the odd PA gig.thanks everyone.
