With movies, they have trailers. Enough to get you interested before the full release, but don't say a whole lot. There's mine: I ordered and received a pair of PM224 boards from Marchand last week. MOSFET output good for 200W into 8 ohms per channel with the right power supply. Gar.

Hopefully to a 200W x 2 MOSFET amp that'll let me see what my JBL drivers can really do. Don't get me wrong. Love the sound of my tubes and gainclone. But I know there's a whole side of these drivers I've never heard before.

You're exactly right. Hit them with 100 watts of clean power and you'll hear what sets them apart

---

from their competition.

Just picked up my power transformer today from Plitron. They're only a 15 minute drive from my office. 40V-0-40V, 500VA and weighs in at 12lb. Should go nicely with the 6 x 12,000uF of caps I got from Digikey. BTW, Plitron is located on Magnetic Drive. Ironic?
