I didn't get your meaning. Can you restate that? What kind of EQ do you want?

It is a single knob control that when turned counterclockwise bass is boosted, treble is cut and when turned clockwise, the situtation is reversed. They are used in the Nad M3, Quad 99, Luxman C12. I think they're cool.

I see. You want a single-knob tone control.

Why not build this:http://home.eunet.cz/rysanek/cor_sym.gifand use a dual pot for bass and treble, wired in oppositeways? That would do what you want.
