This video is a bit long (ten minutes), but it offers a fascinating insight into how the extremists at both ends of the political spectrum are driving Americans away from the two parties and toward a Libertarian/Independent viewpoint.

I'm all for that!

I'd love to see the Libertarian party get some legs over the next few years.

This would never happen because it's counter to the interests of the established parties, but if the vote were ever changed so a person could vote sequentially for their favorite candidates (so if their #1 choice didn't win their vote would automatically go to their #2 choice), Libertarian candidates would start winning all over the place.

I think you're probably right. Sad thing is, the way we're going (already gone), the rights, freedoms and economic securities gained by generations past are rapidly going away. By the time we have a meaningful shift in our political and corporate thinking, it will be in desperate response to a ship already sunk. I hate thinking that way, and want to be a proud American with an optimistic outlook. But I'm afraid that ship already sailed.

There is something called the disclosure project which has been trying to expose that the US government has free energy technology sitting on the shelf. (I'm downloading the movie now, so i'll let you know how that goes) The theory goes that when all else fails, it will be there to pull our rear ends out of the fire.

it makes sense. Quantum physics says a molecule can be at two places at once, ergo, it is unlikely that one would have to violate scientific law to "create" energy (you know why that is in quotes)

I'm no op-amp expert, but my professor tried to allude that op-amps were somehow doing something of that sort.

I think the flux capacitor is coming eventually...
