I have had my Pi #2's long enough and am confident they have settled in. A tad of filling was added later to the cabinets and feel they are performing at the designer's intentions.

The presentation is balanced and they are enjoyable to listen to for long periods of time. The speakers perform past their pricepoint, no embellishments. I found they sound equally good with vintage tube gear or SS.

The picture is of my favorite configuration (gear), minus room treatments.

I am curious if there are other badges available (copper, brass). If so, I'd like to purchase a set.

Thanks again Wayne for the quality product and knowledge, David-

Glad you're happy with your speakers and they're sounding good!

As for logos, I have a few of the plastic stickers in silver and I think some in gold too. I even had some made in a cast at one time. Some in silver, others in pewter (which looks the same). The risers doubled as mounting legs. To install them, we drilled holes in the box and pressed the risers in place.

I think I may still have some of the pewter ones. I'll check around and see if I have any left, if you want, so contact me by E-Mail if you're interested.
