Hi all, this is my first post!

I am planning to build a pair of Pi2 Tower.
To be honest, I have already got a pair of tweeters (given by a friend), but the model is Vifa d25tg (instead of dx...).
Is it possible to use them? What is the difference?

And would be it possible to buy a kit without tweeters?

Your tweeters are rated at 91.5 DB efficiency. They aren't compatible with the woofers. The 2PI speakers are rated at 96 DB. With your tweeters, all you would hear is the bass, because the woofers are much more sensitive. You should buy the full kit. The 2PI tower is a really nice speaker.

Never mind! Thank you.

I am going to think a little about...

Tman,

Where are my manners? I forgot to say welcome to the forum. This is a very friendly place.

Steve

Thank you!

Don't worry...
