Subject: Tweaks That Really Work

I suppose I have tried every tweak in the book, and most have been disappointing. Tube buffer stages between the CD player and the solid state preamp: no difference. Isolation devices: no difference. Megabuck cables: no difference. No matter how hard I try, I can't hear the difference between brass cones and aluminum cones. But I have finally found some tweaks that really do work. These things are amazing! The difference in sound when they are added to the system is phenomenal! I suppose it's ok to post this here since they are not for sale at any price.
