Send me the plans, please?

I already have the mid-horn, don't I?

It's the same as for the 7PI with a 10" driver? I tried it way back when and discovered the JBL 2123s were blown. They're still in the box, un-repaired.

Yes, that's it! Same midhorn.

Bill,

I'll be looking forward to seeing the end result.

Ron

Y'all be waiting awhile for that result

I've got the pieces on the bench almost ready to assemble for the Utah/SB Acoustics nearly like the 2Pi Tower except it's sealed speaker, and that took months to get motivated.

Unfortunately, I've just realised that there's a 3" difference between the plane of the tweeter and woofer voice coils. I'm just used to horns! I really don't want a box on top of box look so will probably abandon the idea of time aligning the voice coils.

Any ideas?

Bill,

I don't think that the 3" difference will matter much in the big scheme of things. Of course if it does, that can be rectified with a more complex crossover.

Ron sends...
