Subject: Audio software for voiceovers?

Right now, I'm an Audacity user. I only use it to record voiceovers. It seems to do what it's supposed to, but I wonder if I should upgrade to some different software. Do any of you record voiceovers? If so, what software can you recommend?

There is no point in learning new software. They are all just interfaces for your sound card anyway. Use the Unicode version of Audacity if you are not already.

Audacity has everything. Spending a bunch of money on a package is not going to really accomplish anything. If you have a hard time using the program and are unwilling to learn, that might be a reason to switch.

Thanks, those were my thoughts too. If it can already do what other programs can, why get something else? Also, what's the difference between Audacity with the Unicode version?

Basically, I forgot to download the UC version once and found that it did not have all the features of the standard version. It's much more developed and feature-rich in my experience.
