I am wanting to get some plans to also build the 4Pi

Now I dont know much about the Pi speakers but have always heard good things about them. I am just wanting a L/R that can slam by itself and atleast hold its own to pretty loud levels with extension good enough to 50hz.

Now I am sure this will do that and the 50hz is just for the sub to cross over to.

I have always wanted to build something like this or the Econowave but never really decided which one. Now I have heard some build the 12" econo and been very happy but another friend made an E-wave with a TD15m and said they have lots of punch and slam to them.

SO I was think something with atleast a 15 would work for me also. Now to extreme levels is more just for headroom. I only have a 14ftx 18ft room with 9ft ceilings I am needing the speakers for. But I would like to have enough volume that I will never really push the speaker. That is the 4Pi yes?

Thank you so much for the plans.

I just need to find out how much the 2226 or whatever they are called will cost me and start building.

They're about \$325.00. We only sell them as a part of a kit.

What is the shipping on something like that to Australia?

I live in Adelaide.

It depends on the shipping method you choose. You can check the price by various shipping methods using the shopping cart. Put the kit in your shopping cart and begin the checkout process. It will ask your address and calculate shipping costs by various shippers and methods. You do not have to provide payment information in order to get a shipping quote.

Hi Wayne,

I'd like to request the plans for your 4Pi & 2Pi (tower) speakers. I can see in the shop I can get crossover boards from you. Do you sell the B&C DE250 also or only as part of a kit. How much is that please?

Thanks

Paul

You've got mail!

We don't sell drivers individually, only as part of a kit. But we do sell crossovers by themselves if you want to source the drivers locally.
