Subject: Quick crossover question- 7 Pi

I have the 7 Pi crossovers (built by Pi speakers) mounted in boxes. The boxes are slightly larger than the X/O boards and about 15cm high. I understand that the crossovers are designed to handle high current: to do this, as designed, do they require some airflow? If so, are a few holes sufficient? Thanks.

They don't need ventillation. It just doesn't get that hot in there, even running wide open.
