Has anyone tried to incorporate a L-pad in the crossover, in order to adjust the volume of the horn in comparison to the woofer?

Mike

The sensitivity matching is accomplished using R1/R2 proportion. I prefer fixed resistors to L-Pads for this application, for a variety of reasons. The following post (and links contained therein) discuss some of the reasons I do not recommend L-Pads for a speaker like this. Tweeter circuits for constant directivity horns and waveguides

Wayne,

Great information. Thanks

Mike
