Subject: Any wiggle room on the 4pi dimensions?

Hi Wayne, I have limited height for speakers. Max height I can accomodate is 24". I can go up to 40" wide and up to 16" deep but can only go 24" high. I am looking at doing the JBL 2226 and B&C 250 components. I could keep similar interior volume at 24" high x 20" wide x 14" deep.

Would this affect the Xo design any?

Any benefits going even wider? Thanks!

Bill's right. There's just no room to squish this box any shorter.

I am a little stuck with my screen wall. I might be able to squeeze out another inch to 25"??

Yeah, you could probably shave that much off the bottom. It's a tight squeeze, no matter how you

---

slice it.

25" tall and 1/2 wider at each side to make up the internal volume should work?

Yes, that should be fine.
