I was pulling the cap and resistor from the small Utah cabinet today to prep for tomorrows unveiling of the big new one, and remembered the old 4PI crossovers, just sittin' in their box on the shelf.

It's been what, 4 years with the new? I hadn't a clue as to the parts I used. Eureka!!!

20 and 7.5 uF OS Aerovox oils, Jantzen 16 ga air core .6mH and 1.5mH Cross-coil Foil, and...Holy Underwear, a pair of unobtanium Edison Price solid copper binding posts!!!

Oh yeah,,,the 20uF oil cap goes on the tweeter and the .6 coil on the woofer and it's super deluxe all the way.
